

## AI-Generated Image & Analysis

 **Task:** Use AI image generation tools (DALL·E, Deep Dream, RunwayML, etc.) to create an AI-generated image based on a prompt.

PROMPT : Generate an image of a kid riding a motorcycle.

OPENART AI

CHATGPT/DALL-E

DEEPDREAM AI

#### REPORT:

After observing all the three images generated by the three different AI tools used , I could observe that Chatgpt is the only ai model which considers ethical and non-ethical conditions while generating images for prompts given.

I did another test in which I tried generating an image of Spongebob riding a motorbike underwater , to which Chatgpt replied saying that due to policy restrictions it could not generate the image instead it would generate an image of a sponge like looking sea creature .But the other two ai tools which are Deepdream Ai and Openart Ai generated me the images of Spongebob riding a motorbike underwater.

So to my understanding using Chatgpt to perform ai actions would be better for us as it considers all the policies and ethical or non-ethical conditions . And also that the other two Ai tools might not be well backed up with there policies or terms and conditions and may face issues like copyright.
